INSTRUCTIONS FOR FILLING OUT THIS FORM:
Thank you for choosing 21st Century SCIENTIFIC, Inc. Since our products tend to be custom, this order/quote form is very detailed. As you complete this form, you will be specifying each parameter of the equipment to be ordered. Accordingly, be patient and review each section carefully. No charge and standard items are usually located near the top of each section, but not always. Check the standard items as well as the custom options in each section to make sure you have not missed anything. You may email this form to us at 21st@wheelchairs.com for review. A detailed written quote will be faxed back to you. If you need assistance filling out this form (or simply prefer us to do it for you), contact our sales department at (800) 448-3680. There is no charge for our assistance and written quotations.

HCPCS codes are not intended to be, nor should they be considered, legal or billing advice. Use of the codes does not ensure coverage or payment for the item. Always verify coverage information with the pay source, attorney or other consultant as needed.

DRIVE TRAIN CONFIGURATION NOTES:

- 1) Generally, configurations with higher top speeds tend to have reduced hill-climbing capability (less torque) and reduced range.
- 2) Do not order drive train configurations with top speeds that exceed the physical or mental capabilities of the driver. Fast chairs are usually not appropriate for children.
- 3) If the motor sprocket size is increased, speed increases, and hill climbing capability decreases. If the drive wheel sprocket size is decreased, speed increases, and hill climbing capability decreases.
- 4) The Panther and chain drive systems supplied with BOUNDER Plus H-Frame chairs do not slip in the rain or snow.
- 5) The Panther and chain drive systems supplied with BOUNDER Plus H-Frame chairs are quiet but can be heard over the motors, and a slight vibration can be felt.
- 6) BOUNDER Plus chairs include ST3M&B. ST3M&B are necessary if you want to be able to go up steep hills and also be able to have top speeds above 8.5 MPH on level surfaces.
- 7) Consider ST4M&B-M for more torque and less speed. Excellent for bariatric patients, people who will use their chair off-road or where a speed limit is enforced. Typically ST4M motors are more efficient than ST3 motors when moving the same user at the same speed.
- 8) A Chain drive is slightly noisier than a Panther drive. Chains need to be lubricated and cleaned, but in general are more durable than a Panther Drive. Manually pushing a chain driven chair is more difficult if the brake release switch fails to operate or the batteries are removed. Chains are recommended for users who are over 300 lbs or hard on equipment (continual fast starts and stops, drive on rough terrain, etc.)
- 9) Top speeds above are estimated. Depending on configuration, your chair may be faster or slower. Specifically, foam filled tires reduce the chair speed by about 10%. Increased patient weight, power seating systems as well as poor battery condition also reduce the chair's top speed.
- 10) Tables revised on 2-20-2018.
